# **European Technical** Assessment

## ETA 05/0242 of 04/03/2019

English translation prepared by IETcc. Original version in Spanish language

#### **General Part**

**Technical Assessment Body issuing** the ETA designated according to Art. 29 of Regulation (EU) 305/2011:

Trade name of the construction product:

Product family to which the construction product belongs:

Manufacturer:

Manufacturing plants:

This European Technical

Assessment contains:

This European Technical Assessment is issued in accordance with regulation (EU) No 305/2011, on the basis of:

This version is a Corrigendum of:

Instituto de Ciencias de la Construcción Eduardo Torroja (IETcc)

**Anchor MTH Anchor MTH-A2 Anchor MTH-A4** 

Torque controlled expansion anchor made of galvanised steel or stainless steel of sizes M6, M8, M10, M12, M14, M16 and M20 for use in noncracked concrete.

European Technical Assessment EAD 330232-00-0601 "Mechanical Fasteners for use in concrete", ed. October 2016

ETA 05/0242 issued on 27/06/2018

English translation prepared by IETcc

This European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and should be identified as such.

This European Technical Assessment may be withdrawn by the issuing Technical Assessment Body, in particular pursuant to information by the Commission according to article 25 (3) of Regulation (EU) No 305/2011.

#### SPECIFIC PART

### 1. Technical description of the product

The Index MTH in the range of M6, M8, M10, M12, M14, M16 and M20 is an anchor made of galvanised steel. The Index MTH-A2 and MTH-A4 in the range of M6, M8, M10, M12, M16 and M20 are anchors made of stainless steel of grades A2 and A4 respectively. The anchor is installed into a predrilled cylindrical hole and anchored by torque-controlled expansion. The anchorage is characterised by friction between expansion clip and concrete.

Product and installation descriptions are given in annexes A1 and A2.

# 2. Specification of the intended use in accordance with the applicable European Assessment Document.

The performances given in section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a mean to choosing the right products in relation to the expected economically reasonable working life of the works.

#### 3. Performance of the product and references to the methods used for its assessment

### 3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
MTH product performance for static or quasi static actions	See annex C
MTH-A2 and MTH-A4 product performance for static or quasi static actions	See annex D

#### 3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
I Reaction to tire	Anchorages satisfy requirements for class A1
Resistance to fire	No performance assessed

# 4. Assessment and verification of constancy of performance (hereinafter AVCP) system applied, with reference to its legal base

The applicable European legal act for the system of Assessment and Verification of Constancy of Performances (see annex V of Regulation (EU) No 305/2011) is 96/582/EC.

The system to be applied is 1.

English translation prepared by IETcc

5. Technical details necessary for the implementation of the AVCP system, as provided for in the applicable European Assessment Document.

The technical details necessary for the implementation of the AVCP system are laid down in the quality plan deposited at Instituto de Ciencias de la Construcción Eduardo Torroja.

Instituto de Ciencias de la Construcción Eduardo Torroja CONSEJO SUPERIOR DE INVESTIGACIONES CIENTÍFICAS

## **Product and identification**

MTH, MTH-A2, MTH-A4 anchor

### Identification on anchor:

• Expansion clip:

Anchor MTH: Company logo + "MTH" + Metric size.
 Anchor MTH-A2: Company logo + "MTH-A2" + Metric size.
 Anchor MTH-A4: Company logo + "MTH-A4" + Metric size.

• Anchor body: Metric x Length

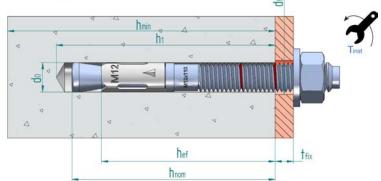

Red ring marks to show embedment depths

• Anchor length letter code on the tip:

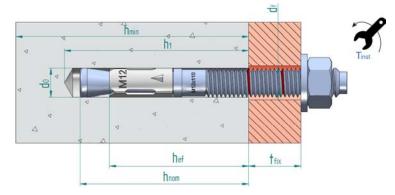

Letter code	Length [mm]
В	51 ÷ 62
С	63 ÷75
D	76 ÷ 88
Е	89 ÷ 101
F	102 ÷ 113
G	114 ÷ 126
Н	127 ÷139
I	140 ÷ 151
J	152 ÷ 164
K	165 ÷ 177
L	178 ÷ 190
M	191 ÷ 202
N	203 ÷ 215
Р	229 ÷ 240
Q	241 ÷ 253
R	254 ÷ 266
S	267 ÷ 300

MTH, MTH-A2, MTH-A4 anchor	
Product description	Annex A1
Identification	

## **Installed condition**

Standard embedment depth (all sizes)

Reduced embedment depth (sizes M8, M10, M12, M16 and M20)

 $\begin{array}{ll} d_0: & \text{Nominal diameter of drill bit} \\ d_f: & \text{Fixture clearance hole diameter} \\ h_{\text{ef}}: & \text{Effective anchorage depth} \end{array}$ 

h₁: Depth of drilled hole

h<sub>nom</sub>: Overall anchor embedment depth in the concrete

 $h_{\text{min}}$ : Minimum thickness of concrete member

 $t_{\text{fix}}$ : Fixture thickness  $T_{\text{ins}}$ : Installation torque

## **Table A1: Materials**

## **Product description**

Annex A2

Installed condition and materials

#### Intended use

#### **Anchorages subjected to:**

• Static or quasi static loads: all sizes and embedment depths

#### **Base materials:**

- Reinforced and unreinforced concrete according to EN 206-1
- Strength classes C20/25 to C50/60 according to EN 206-1
- Uncracked concrete

## Use conditions (environmental conditions):

- The anchor shall be used in dry internal conditions: all anchor types
- Structural subjected to external atmospheric exposure (including industrial and marine environment) and to permanent internal conditions with no particular aggressive conditions exists: screw types made of stainless steel with marking A4. Such particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used).

### Design:

- Anchorages are designed under the responsibility of an engineer experienced in anchorages and concrete.
- Verifiable calculation rules and drawings are prepared taking into account of the loads to be attached. The position of the anchor is indicated on the design drawings (e.g. position of the anchor relative to reinforcement or to supports, etc.)
- Anchorages under static or quasi-static loads are designed for design Method A in accordance with:
  - EN 1992-4:2018
- Size M8 in reduced embedment depth is restricted to anchoring of structural components which are statically indeterminate.

#### Installation:

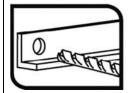

- Hammer drilling only.
- Anchor installation carried out by appropriately qualified personal and under the supervision of the person responsible for technical matters of the site.
- In case of aborted hole: new drilling at a minimum distance away of twice the depth of aborted hole or smaller distance if the aborted hole is filled with high strength mortar and if under shear or oblique tension load it is not the direction of the load application.
